

GO AHEAD

take your first big step

Sometimes it's hard to be in the here and now of courses and exams while you're worrying about money to pay tuition and wondering how you'll prepare for your first big step into the real world after graduation.

Since 1984, University of Kentucky engineering students have been using "Co-op" as a way to take care of those worries. A bridge between the classroom and the career in the real world, co-op is a way to make money for school, take a break from the classroom and continue to learn (and gain real world resume-worthy experience).

For example, Sarah and Kathy are working in the color science and imaging department at Lexmark™, a UK co-op partner for more than twenty years now. Will their experience be valuable? Why not ask their manager, Neal, who was a UK co-op at Lexmark just a few years ago and made a smooth transition to starting his career there.

Or ask Galen, who won an ASEE Co-op of the Year award for work in Lexmark's Development Lab as a UK engineering student, and went on to get patents on his discoveries, a great career starter.

Why not start your career now and avoid the worry?
